Add-on Air Conditioning

There's nothing like air conditioning to deliver year-round comfort to your home and family.

But when you live in one of the harshest climates on earth, you need a system that's built to handle it.

ActronAir add-on air conditioning systems are engineered to operate at temperatures up to 50°C.

That's why you can rely on an ActronAir system to continue performing even on the hottest summer days. ActronAir. It's Australian for air conditioning.

At ActronAir, we see air conditioning differently.

The indoor unit connects to the gas ducted system to deliver thermostatically controlled refrigerated cooling.

## Classic add-on air conditioning.

Every home and office is different and choosing an air conditioner isn't a decision to be taken lightly. That's because factors like the size of your house, how many rooms it has, whether it's one or multi-storey are just a few of the variables that can impact an air conditioner's efficiency and running costs.

If your home has existing gas ducted heating, you may be able to utilise your existing ductwork and upgrade with Classic add-on air conditioning.

Classic add-on air conditioning works quietly to remove heat and humidity in your home or office.

Aesthetically pleasing, the Classic add-on air conditioning system can even utilise the same registers as your gas ducted system to provide thermostatically controlled refrigerated cooling.

When you choose the comfort of an ActronAir add-on air conditioning system, you have peace of mind in reliability and performance, keeping you cool all summer.

ActronAir's Classic add-on air conditioning uses Australian designed technology to cool your whole house or just a few zones.

## Make Summer more bearable.

# The outdoor unit looks different - because it is!

One look at an ActronAir system tells you that it's unlike ordinary air conditioners.

For a start, the outdoor unit has a unique louvre grille to protect it from hard knocks – the sort you might get in a back yard cricket match. The durable powder coating resists corrosion and provides further protection against anything the Australian climate can throw its way.

Another obvious inclusion is the vertical air discharge. This ensures hot air is released upwards and keeps the temperature surrounding the unit to a minimum. This feature is ideally suited for installations near boundary fences. On very hot days, this can have a big impact on how efficiently an air conditioner functions.

High Performance outdoor fans

Vertical discharge is standard for all models releases hot air upwards for improved performance.

But as well as the features you can see, there's another big difference on the inside. That's where ActronAir uses a high performance heat exchanger to cope with summer heatwaves with a superior operating range of up to 50°C.

The electronics form the 'brains' of the system and ensure that all components work seamlessly to deliver the best performance.

At the heart of all ActronAir units is a high performance scroll compressor for improved reliability and long lasting operation.

ActronAir® louvre grille provides superior protection against the elements

Extra large heat exchanger delivers improved efficiency + quicker cooling when you need it

## Comfort you can depend on.

ActronAir is an Australian owned and managed company. So you'll never have to look far for spare parts or product support, especially with the ActronAir National Service Network providing quick and reliable service where and when it's needed.

A 5-year residential warranty provides even more peace of mind.

## Insist on an ActronAir specialist

Every home is different and your ActronAir specialist will advise you on the best configuration to suit your lifestyle.

An ActronAir specialist is also qualified to install your air conditioning system quickly and safely and provide the best ongoing service should you need maintenance, spare parts or advice.

“Cool.”
