# INVERTER TECHNOLOGIES

Mitsubishi Electric inverters ensure superior performance including the optimum control of operation frequency. As a result, optimum power is applied in all cooling/heating ranges and maximum comfort is achieved while consuming minimal energy. Fast, comfortable operation and amazingly low running cost – That’s the Mitsubishi Electric promise.

## INVERTERS – HOW THEY WORK

Inverters electronically control the electrical voltage, current and frequency of electrical devices such as the compressor motor in an air conditioner. They receive information from sensors monitoring operating conditions, and adjust the revolution speed of the compressor, which directly regulates air conditioner output. Optimum control of operation frequency results in eliminating the consumption of excessive electricity whilst providing the most comfortable room environment.

## ECONOMIC OPERATION

Impressively low operating cost is a key advantage of inverter air conditioners. We’ve combined advanced inverter technologies with cutting-edge electronics and mechanical technologies to achieve a synergistic effect that enables improvements in cooling/heating performance efficiency. Better performance and lower energy consumption are the result.

## TRUE COMFORT

Simple comparison of air conditioner operation control with and without an inverter.

■ Inverter Operation (cooling mode)

### Point 1 Quick & Powerful

Increasing the compressor motor speed by controlling the operation frequency ensures powerful output at start-up, and brings the room temperature to the comfort zone faster than units not equipped with an inverter. Hot rooms are cooled, and cold rooms are heated faster and more efficiently.

### Point 2 Room Temperature Maintained

The compressor motor operating frequency and the change of room temperature are monitored to calculate the most efficient waveform to maintain the room temperature in the comfort zone. This eliminates the large temperature swings common with non-inverter systems, and guarantees a pleasant, comfortable environment.

# MORE ADVANTAGES WITH MITSUBISHI ELECTRIC

## Joint Lap DC Motor

Mitsubishi Electric has developed a unique motor, called the "Poki-Poki Motor" in Japan, which is manufactured using a joint lapping technique. This innovative motor operates based on a high-density, high-magnetic force, leading to extremely high efficiency and reliability.

## Magnetic Flux Vector Sine Wave Drive

This drive device is actually a microprocessor that converts the compressor motor's electrical current waveform from a conventional waveform to a sine wave (180° conduction) to achieve higher efficiency by raising the motor winding utilisation ratio and reducing energy loss.

## Reluctance DC Rotary Compressor

Powerful neodymium magnets are used in the rotor of the reluctance DC motor. More efficient operation is realised by strong magnetic and reluctance torques produced by the magnets.

## Highly Efficient DC Scroll Compressor

Higher efficiency has been achieved by adding a frame compliance mechanism to the DC scroll compressor. The mechanism allows movement in the axial direction of the frame supporting the cradle scroll, thereby greatly reducing leakage and friction loss, and ensuring extremely high efficiency at all speeds.

## Rare Earth Magnet Rotor (Compressor)

An innovative motor with a rare earth magnet rotor is used in the compressor to ensure excellent efficiency. The rare earth magnet has a residual magnetic flux density three times that of the previously used ferrite magnet.

## DC Fan Motor

A highly efficient DC motor drives the fan of the outdoor unit. Efficiency is much higher than an equivalent AC motor.

## Vector-Wave Eco Inverter

This inverter monitors the varying compressor motor frequency and creates the most efficient waveform for the motor speed. As a result, operating efficiency in all speed ranges is improved, less power is used and annual electricity cost is reduced.

Smooth wave pattern

Inverter size has been reduced using insert-moulding, where the circuit pattern is moulded into the synthetic resin. To ensure quiet operation, soft PWM control is used to prevent the metallic whine associated with conventional

## PAM (Pulse Amplitude Modulation)

PAM is a technology that controls the current waveform so that it resembles the supply voltage wave, thereby reducing loss and realising more efficient use of electricity. Using PAM control, 98% of the input power supply is used effectively.

## Power Receiver and Twin LEV Control

Mitsubishi Electric has developed a power receiver and twin linear expansion valves (LEV) circuit that optimise compressor performance. This technology ensures optimum control in response to operating waveform and outdoor temperature. Operating efficiency has been enhanced by tailoring the system to the characteristics of R410A refrigerant.

## Grooved Piping

High-performance grooved piping is used in heat exchangers to increase the heat exchange area.

### Energy-efficient Control

#### Operation Control Functions

Auto-return

Prevents wasteful operation by automatically returning to the preset temperature after specified operating time (PAR-30MAA)

After adjusting the temperature for cooling on a hot summer day, or initial heating in winter, it is easy to forget to return the temperature setting to its original value. The Auto-return function automatically resets the temperature back to the original setting after a specified period of time, thereby preventing overcooling/overheating. The Auto-return activation time can be set in 10-minute units, in a range between 30 and 120 minutes.

\*Auto-return cannot be used when Temperature Range Restriction is in use.

Temperature Range Restriction

Temperature Range Restriction prevents overcooling/overheating (PAR-30MAA/PAR-21MAA)

Using a temperature that is 1°C lower/higher for cooling/heating results in a 10% reduction in power consumption.\* Temperature Range Restriction limits the maximum and minimum temperature settings, contributing to the prevention of overcooling/overheating.

\*In-house calculations.

Restaurant

### Auto-off Timer

Turns heating/cooling off automatically after preset time elapses (PAR-30MAA/PAR-21MAA)

When using Auto-off Timer, even if one forgets to turn off the unit, operation stops automatically after the preset time elapses, thereby preventing wasteful operation. Auto-off Timer can be set in 10-minute units, in a range between 30 minutes and 4 hours. Eliminating all anxiety about forgetting to turn off the unit.

Recommended for **Meeting room** **Changing room**

### Weekly Timer

Set up to 8 patterns per day including temperature control (PAR-30MAA/PAR-21MAA)

The Weekly Timer enables the setting of operation start and finish times and adjusting the temperature as standard features. Up to 8 patterns per day can be set, providing operation that matches the varying conditions of each period, such as the number of customers in the store.

\*Weekly Timer cannot be used when On/Off Timer is in use (only for PAR-21MAA).

### Operation Lock

Fixed temperature setting promotes energy savings (PAR-30MAA/PAR-21MAA)

In addition to operation start/stop, the operation mode, temperature setting and airflow direction can be locked. Unwanted adjustment of temperature settings is prevented and an appropriate temperature is constantly maintained, leading to energy savings. This feature is also useful in preventing erroneous operation or tampering.

Recommended for **Office** **School** **Public hall** **Hospital** **Computer server facility**

# FUNCTIONS

## ENERGY-SAVING

### *i-see Sensor* Felt Temperature Control

The “i-see Sensor” sweeps from side-to-side automatically monitoring the floor temperature over a wide area spanning 150°.

Conventional air conditioners monitor the air temperature at the top of a room to control room temperature and fail to take foot-level temperature, that which has the strongest impact on room comfort, into consideration. The “i-see Sensor” monitors the floor temperature and estimates the “felt temperature” (i.e., the temperature felt by people in the room). The airflow speed and temperature are adjusted to prevent over-cooling/heating, thereby eliminating the consumption of excessive electricity.

### AREA Area Temperature Monitor

The “i-see Sensor” monitors the whole room in sections and directs the airflow to areas of the room where the temperature does not match the temperature setting. (When cooling the room, if the middle of the room is detected to be hotter, more airflow is directed towards it.) This eliminates unnecessary cooling/heating and contributes to lower electricity costs.

### Econo Cool Energy-saving Feature

“Econo Cool” is an intelligent temperature control feature that adjusts the amount of air directed towards the body based on the air-outlet temperature. The setting temperature can be raised by as much as 2°C without any loss in comfort, thereby realising a 20% gain in energy efficiency. (Function only available during manual cooling operation.)

	Conventional	Econo Cool
Ambient temperature	35°C	35°C
Set temperature	25°C	27°C
Perceived temperature	30°C	29.3°C

### Temperature distribution image

A comfortable room environment is maintained even when setting the temperature 2°C higher than the conventional cooling mode.

### “I Feel” Control

The “I Feel” fuzzy-logic control memorises the most desirable temperature setting. If the “TOO WARM” or “TOO COOL” button on the remote controller is pressed, the system adds the choice to the control memory and adjusts the temperature so that the most comfortable temperature is provided. That temperature setting is used the next time the unit is turned on.

### Demand Control Demand Function (Onsite Modification)

It is possible to reduce electricity consumption within a range from 0 to 100% by performing the following onsite installation. The demand function can be enabled by adding a commercially available input contact point On/Off switch to the CNDM connector (the contact point demand input, optional parts.)

- Incorporate the “Adapter for external input (PAC-SC36NA)” into the circuit.
- By switching SW7-1 on the control circuit board for the outdoor unit, the following power consumption restrictions (compared to rated power) can be set.

SW7-1	Power consumption when SW2 is on
OFF	0% (Forced compressor stop)
ON	50%

## ATTRACTIVE

### Pure White

Pure white is adopted for the unit colour; white expresses the essence of cleanliness and easily matches virtually all interior décor.

### AUTO VANE Auto Vane

The vane closes automatically when the air conditioner is not running, concealing the air outlet and creating a flat surface that is aesthetically appealing.

## AIR QUALITY

### Plasma Duo Filter Systems Plasma Duo

Units are equipped with a pre-filter and two special filters that perform plasma air cleaning and plasma purification functions (Plasma Duo). The plasma system remove bad odours and bacterial particles of micron- and nanometre-size from the air.

#### Air Cleaning Filter

The filter is charged with static electricity, enabling it to attract and capture dust particles that regular filters don't.

#### Fresh-air Intake

Indoor air quality is enhanced by the direct intake of fresh exterior air.

#### Anti-allergy Enzyme Filter

The anti-allergy enzyme filter works to trap allergens such as moulds and bacteria and decompose them using enzymes retained in the filter.

#### High-efficiency Filter

This high-performance filter has a much finer mesh compared to standard filters, and is capable of capturing minute particles floating in the air that were not previously caught.

#### Nano Platinum Filter

The filter has a large capture area and incorporates nanometre-sized platinum-ceramic particles that work to kill bacteria and deodorise the circulating air.

### Catechin Filter

Catechin is a bioflavonoid by-product of green tea with both antiviral and antioxidant qualities. It also has an excellent deodorising effect, which is why Mitsubishi Electric uses the compound in its air conditioner filters. In addition to improving air quality, it prevents the spreading of bacteria and viruses throughout the room. Easily removed for cleaning and maintenance, when the filter is washed regularly the deodorising action is rated to last more than 10 years.

#### Long-life Filter

A special process for the entrapment surface improves the filtering effect, making the maintenance cycle longer than that of units equipped with conventional filters.

#### Filter Check Signal

Air conditioner operating time is monitored, and the user is notified when filter maintenance is necessary.

#### Electrostatic Anti-allergy Enzyme Filter

This function features both the Air Cleaning Filter and Anti-allergy Enzyme Filter.

## AIR DISTRIBUTION

### Horizontal Vane

The air outlet vane swings up and down so that the airflow is spread evenly throughout the room.

### Vertical Vane

The air outlet vane swings from side to side so that the airflow reaches every part of the room.

### Wide and Long Airflow

The wide and long airflow function is especially beneficial for large spaces, helping to ensure that air is well circulated and reaches every corner of the room.

#### Wide Airflow

This unique airflow system distributes air horizontally over a wide-ranging 150° in heating mode and 100° in cooling mode. Simply press the Wide Swing icon on the remote controller to select the desired airflow from seven different patterns.

### High Ceiling Mode

In the case of rooms with high ceilings, the outlet-air volume can be increased to ensure that air is circulated all the way to the floor.

### Low Ceiling Mode

If the room has a low ceiling, the airflow volume can be reduced for less draught.

### Auto Fan Speed Mode

The airflow speed mode adjusts the fan speed of the indoor unit automatically according to the present room conditions.

#### Long Airflow

Use this function to ensure that the airflow circulates to areas far across the room. Press the Long Airflow icon on the remote controller to extend reach up to as far as 12 metres from the unit.

## CONVENIENCE

### On/Off Operation Timer

Use the remote controller to set the times of turning the air conditioner On/Off.

### "i save" Mode

"i save" is a simplified setting function that recalls the preferred (preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting.

Using this function contributes to comfortable waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

\* Temperature can be preset to 10°C when heating in the "i-save" mode (except when connected to MXZ-8B140/160VA).

### Auto Changeover

The air conditioner automatically switches between heating and cooling modes to maintain the desired temperature.

\*When multiple indoor units connected to an MXZ outdoor unit are running at the same time, simultaneous cooling and heating is not possible.

### Auto Restart

Especially useful at the time of power outages, the unit turns back on automatically when power is restored.

### Low-temperature Cooling

Intelligent fan speed control in the outdoor unit ensures optimum performance even when the outside temperature is low.

### Low-noise Operation (Outdoor Unit)

System operation can be adjusted to prioritise less noise from the outdoor unit over air conditioning performance.

### Ampere Limit Adjustment

# FUNCTIONS

## INSTALLATION

### Cleaning-free Pipe Reuse (2C52/3C54/4C71/4C80/5C100/6C120)

The application of pipe reuse technology makes it possible to reuse the same piping, thereby allowing cleaning-free renewal of air conditioning systems that use R22 refrigerant.

\* The existing piping can not be reused if the outer diameter and the thickness of the existing piping do not meet specifications or some damage on piping is found.

### Wiring/Piping Correction Function\*

The push of a single button is all that is required to confirm that piping and wiring are properly connected. Corrections are made automatically if a wiring error is detected, eliminating the need for complicated wiring confirmation work when expanding the number of rooms served.

\* This function cannot be used when the outdoor temperature is below 0°C. The correction process requires 10–20 minutes, and only works when the unit is set to the Cooling mode.

### Drain Pump

A built-in drain pump enables drain piping to be raised.

### Flare Connection

Flare connection to cooling pipe work is possible.

## MAINTENANCE

### Quick Clean Body

The cover panel can be quickly removed for washing and the airflow vents can be opened without any special tools, making it easy to clean the inside of the air conditioner in minutes. Periodic cleaning of the air conditioner is recommended to maintain optimum operating efficiency and energy savings.

Open the vents and reach into clean the fan

#### Exclusive Quick Clean Kit (Optional)

Our exclusive "Quick Clean Kit" can be easily connected to a household vacuum cleaner for quick and easy cleaning of the heat exchanger.\*

\* It is highly recommended that rubber gloves be worn when cleaning the heat exchanger; touching it with bare hands may lead to injury.

## Nano Platinum Filter

Nano Platinum

This filter incorporates nanometre-sized platinum-ceramic particles that generate stable antibacterial and deodorising effects. The size of the three-dimensional surface has been increased as well, enlarging the filter capture area. These features give the Nano Platinum Filter better dust collection performance than conventional filters. The superior air-cleaning effectiveness raises room comfort yet another level.

# MSZ-F SERIES

The MSZ-F Series is designed for optimum cooling/heating performance as well as operational comfort. Quiet, energy-saving operation is supported by some of Mitsubishi Electric's latest technologies. Advanced functions such as i-see Sensor temperature control and the Plasma Duo air filtering and purification system raise room comfort levels to new heights.

MSZ-FB25/35/50VA

## Quiet Operation

Minimum indoor unit operating noise has been reduced by equipping the unit with a larger blower fan that enables the motor speed to be reduced without reducing the air conditioning capacity.

## Quick Clean Body

The front panel is detachable and the airflow vents can be opened without requiring any special tools, making air conditioner cleaning and maintenance easier than ever. Periodic cleaning of the air conditioner is recommended to ensure that operation efficiency and energy savings are maximised.

The inner fan is placed within ready reach, for handy cleaning.

## i-see Sensor

Sensor sweeps from side-to-side automatically monitoring the floor temperature over a wide area spanning 150°.

Conventional air conditioners monitor the air temperature at the top of a room to control room temperature and fail to take floor-level temperature, that which has the strongest impact on room comfort, into consideration. The "i-see Sensor" monitors floor-level temperature to ensure that optimum comfort is obtained throughout the room.

### Cooling

Floor-level temperature is monitored to prevent excessive cooling.

Cold air migrates to the floor, and this can result in excessive cooling. The "i-see Sensor" monitors the temperature at the floor level and adjusts the outlet-air temperature to prevent over-chilling.

### Heating

Floor-level temperature is monitored to determine if heating is needed.

Warm air migrates to the ceiling, thereby failing to warm the floor-level zone. The "i-see Sensor" monitors the temperature at the floor level and adjusts the outlet-air temperature to prevent insufficient warming.

Proper maintenance keeps electricity cost low

The exclusive Quick Clean Kit is easily connected to household vacuum cleaners for quick and convenient cleaning of the heat exchanger and fan.\*

\* Wearing gloves is highly recommended when cleaning the heat exchanger; touching it with bare hands can cause injury.

# MSZ-G SERIES

MSZ-GE60/71/80VA

## Stylish and Compact (22/25/35/42/50)

An elegant, high-quality look is achieved through the new stylish design adopted for indoor units. The simple ergonomic square shape and pure white colour express a sense of sophistication that matches well with virtually any interior décor.

## Nano Platinum Filter (60/71/80)

This filter incorporates nanometre-sized platinum-ceramic particles that generate stable antibacterial and deodorising effects. The size of the three-dimensional surface has been increased as well, enlarging the filter capture area. These features give the Nano Platinum Filter of the MSZ-GE60/71/80 models better dust collection performance than conventional filters. The superior air-cleaning effectiveness raises room comfort yet another level.

\* Filter can be washed with water (air-cleaning effect is maintained)

## Quiet Operation

A "Silent Mode" setting has been added to the fan speed settings, ensuring super-quiet operation below 20dB for model sizes 35 and under. Perfect for the bedroom; it's so quiet you'll check to see if it's on.

## "i save" Mode (22/25/35/42/50/60/71/80)

"i save" is a simplified setting function that recalls the preferred (preset) temperature by pressing a single button on the remote controller. Press the same button twice in repetition to immediately return to the previous temperature setting. Using this function contributes to comfortable, waste-free operation, realising the most suitable air conditioning settings and saving on power consumption when, for example, leaving the room or going to bed.

## Powerful Mode (60/71/80)

This one-touch operation mode ensures faster cooling and heating. It automatically sets the indoor unit fan at maximum speed and the outdoor unit at maximum capacity, cools/heats the room for 15 minutes, and returns the indoor and outdoor units to their regular settings.

# MFZ SERIES

A unique innovation in air conditioning that fits into any room in the home. A ergonomic design combined with powerful yet comfortable performance and silent operation.

MFZ-KA25/35/50VA

## Slim and Trim Body

The body of the MFZ is slim and trim, making it ideal for use in virtually any room. The front panel is removable and made of washable material, making maintenance and cleaning easier than ever. Periodic maintenance helps to keep the unit clean and beautiful, as well as ensure maximum energy savings.

## Optimum Air Distribution

A powerful blower provides optimum distribution of air from the upper and lower air outlets. The result is a comfortable environment with an even temperature throughout the room. There are five settings for the upper vane and four speed settings for the fan, all of which can be set using the remote controller.

The air from the upper and lower outlets is carefully controlled and distributed evenly to all corners of the room. In heating mode, more warm air is directed towards the floor level for greater overall comfort.

## Advanced Inverter Control – Efficient Operation All the Time

Mitsubishi Electric's cutting-edge inverter technologies are adopted to provide automatic adjustment of operation load according to need. This reduces excessive consumption of electricity, and thereby realises increased energy savings.

## Quiet Operation

Mitsubishi Electric air conditioners are renowned as some of the quietest models available. The floor-standing units are no exception. Quiet 22dB operation\* creates a silent, comfortable space where people don't even notice that the air conditioner is running.

\*2.5kW class.

Only 22dB\*

## Trouble-free Installation and Maintenance

Using the original installation plate that comes as standard equipment, installation of the unit is easy. Levelling adjusters are provided, preventing damage to the wall. Generous pipe length (20–30 metres) is provided, so there is no need to worry about distance to the outdoor unit. All units are equipped with an automatic self-diagnostics function as well. Simply access the trouble log recall mode for instant troubleshooting.

## Optimum Airflow

### Individual Vane Settings

Optimum airflow settings provide maximum comfort throughout the room.

In addition to the selection of variable airflow patterns (i.e., 2-, 3- or 4-way), this function allows the independent selection of vertical airflow levels for each vane, thereby maintaining a comfortable room environment with even temperature distribution.

72 Airflow Patterns

### Wide Airflow

Wide-angle outlets distribute airflow to all corners of the room.

The outlets are larger than those of previous models and the shape has been improved for better wide-angle ventilation.

Individual Vane Setting + Wide Airflow

The combination of individual vane setting, which enables the optimal outlet setting for each room layout, and the wide airflow function works to ensure even temperature distribution throughout each room. The result is uniformly comfortable air conditioning.

# FEATURES OF THE BRANCH BOX

For MXZ-8B140VA/MXZ-8B160VA

PAC-AK52BC

PAC-AK31BC

## FLEXIBLE INSTALLATION

### Indoor Installation

The branch box can be installed in the ceiling, with the only parts visible being two pipes (liquid and gas) on the wall, thus improving appearance. In addition, the piping length to the indoor units has been reduced. Maintenance is also easier through improved access to the circuit board and other inner parts by simply removing the side and bottom covers.

### Outdoor Installation

The branch box can be installed outdoors by using the optional cover for outdoor installation. It can be suspended from the building eaves for easy maintenance access, eliminating the need for a special maintenance hole in the ceiling.

## NOISE KEPT TO A MINIMUM (LEV Located in the Branch Box)

The branch box houses the linear expansion valve (LEV), a valve which coordinates the flow of refrigerant and tends to produce a certain amount of noise. Since the branch box can be positioned in the ceiling or outdoors, it keeps the noise inevitably generated by the LEV away from living spaces, allowing a comforting silence to prevail.

PAC-AK52BC

## BRAZING-FREE, QUICK INSTALLATION

All the piping leading to and from the branch box is connected using flare joints, which are easy to use and enable pipes to be connected quickly. In addition to the time and cost benefits of eliminating expensive, time-consuming brazing, the flare connection does not require the use of flame, thus providing a higher level of safety.

## SIZE OF PIPING CONNECTION

	A	B	
Liquid	ø9.52mm (ø3/8 in.)	PAC-AK52BC	PAC-AK31BC
		ø6.35 (ø1/4 in.) × 5	ø6.35 (ø1/4 in.) × 3
Gas	ø15.58mm (ø5/8 in.)	ø9.52 (ø3/8 in.) × 4 + ø12.7 (ø1/2 in.) × 1	ø9.52 (ø3/8 in.) × 3

The piping connection size differs according to the type and capacity of indoor units. Match the piping connection size for the indoor unit and branch box.

If the piping connection size of the branch box does not match that of the indoor unit, use optional joint pipes to the branch box. (Connect the joint pipes directly to the branch box.)

## Energy Saving with High EER and COP

Thanks to inverter technology, we have realised a higher energy efficiency COP of 4.79 (MXZ-4C71VA in heating) for maximum comfort.

**COP  
4.79**

## Quiet Operation (Silent Mode)\*

With the MXZ outdoor unit, operating noise (outdoor) is just 44dB\* (MXZ-3C54/4C80 in cooling mode). In combination with the MSZ-FB25VA, indoor noise can also be reduced to a quiet 20dB.

**Indoor Only  
20  
dB**      **Outdoor Only  
44  
dB**

\*Quiet mode needs to be set when installed.

## Advanced Remote Controller

The optional wired remote controller (PAR-30MAA\*) with a weekly timer function enables eight separate pattern settings in a single day.

\*Requires optional interface (MAC-333IF-E)

PAR-30MAA

## Fix Operation Mode

“Fix Operation Mode” can be selected to prevent operating in an erroneous mode. This is especially convenient in places where many people gather, such as in hotels.

## Operable under Low Outdoor Temperatures

Even when it is as cold as -15°C outside, both heating and cooling operation are possible. Cooling may be suitable in winter for crowded spaces such as in pubs.

## Longer Piping Length

To ease installation work at any site, piping is extendable up to 80 metres\* in total length and 15 metres in height (additional refrigerant charge may be required).

\*MXZ-5/6

Up to 8 indoor units can be connected!

## ▲ NOTICE

- Products in this brochure contain and operate with R410A refrigerant and synthetic oils. Please refer to the installation instructions before installation or servicing of these products.
- Under Australian law, only persons suitably licensed are permitted to install, service or repair air conditioning units.
- The buyer must ensure that the person and/or company who is to install, service or repair the air conditioner has the necessary licenses, qualifications and experience to perform the work.
- Do not install indoor units in areas (e.g., mobile phone base stations) where the emission of VOCs such as phthalate compounds and formaldehyde is known to be high, as this may result in a chemical reaction.
- When installing, relocating or servicing the air conditioners, use only the specified refrigerant (R410A) to charge the refrigerant lines. Do not mix the specified refrigerant with any other refrigerant and do not allow air to remain in the lines. If air is mixed with the refrigerant, it can be the cause of abnormally high pressure in the refrigerant lines and may result in an explosion and other hazards. The use of a refrigerant other than the one specified for the system will cause mechanical failure, system malfunction or unit breakdown. In some cases, it may also seriously reduce product safety.

Mitsubishi Electric Shizuoka Works acquired ISO9001 certification under Series 9000 of the International Standard Organization (ISO) based on a review of Quality warranties for the production of air conditioning equipment. The plant also acquired environmental management system standard ISO 14001 certification.
